Overview

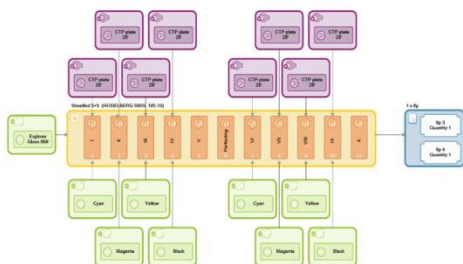

Granpak is a family company specializing in the production of cardboard and laminated packaging for 20 years, founded in 2001. Granpak offers services from concept to finished products to its customers. The company started with shoe packaging, but soon expanded to include products for the beauty, horticultural, tobacco, toy and food industries. In 2013, Granpak built a state of the art production plant, offering its customers the most modern industrial complex in the region.

In both 2015 and 2020, Granpak was named on the prestigious Forbes Diamonds list- companies that have demonstrated the highest efficiency in their operations, have high credibility and reliability scores, and have achieved dynamic growth.

Granpak's goal, according to its management team, is to be more than just a printer, but a partner and advisor to its customers. To this end, Granpak is dedicated to investing in new technology, and HiFlow, with its tech innovations, fits perfectly into this strategy.

HiFlow's Workflow Diagram assists planning, scheduling and shop floor workers

After implementing HiFlow, Granpak optimizes production scheduling with direct access to technological documentation. When a quote becomes a job, HiFlow's

Workflow Diagram is instantly created and allows planning and scheduling to see all parameters of the job. It's a compendium of knowledge gathered in one place. It facilitates the verification of orders and helps to catch technological errors and mistakes in the job specifications.

Thanks to the visibility, all employees are determined to minimize the loss of materials for each operation. As a result, Granpak is observing a reduction in material consumption during and after production.

Reporting reveals insights for Granpak

Granpak can analyze processes before and after production, at any time. Error and downtime reports indicate points where changes or improvements are needed. Management can analyze performance of machines, as well as individually assess operators.

HiFlow gathers important information for reporting on individual clients. Post-production calculations are compared with actual execution, so it is possible to assess the profitability of clients. Additionally, the management team can decide about changes in the estimate for future orders, or to determine the clients where profitability is highest.

GRANPAK sees increased production, without increased staff

“Because of the rapid growth of our company, we knew we needed to implement an MIS. After implementing HiFlow, we did see increased production capacity as well as improved organizational procedures. Automation through HiFlow has increased our production capacity without the need to hire new employees.

HiFlow also helped us tackle comprehensive projects like Granpak’s launch of new, innovative, and ecological packaging solutions” - said Mariusz Korczak - President of Granpak

One investment that will scale as Granpak grows

Granpak expects a great amount of growth in the coming decade after its extensive capitol investments and its investment in a comprehensive end-to-end MIS system.

“As our company is now experiencing great growth, HiFlow is definitely helping us scale.” - said Mariusz Korczak - President of Granpak

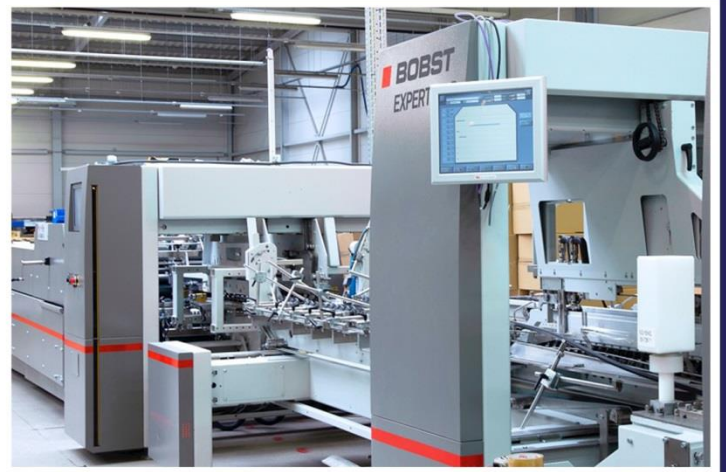

Case Study

A commitment to serving Granpak's unique needs

Granpak's packaging production profile is unique; almost every product is individual in design. And HiFlow acknowledges that fact. Tools and dies, machines, substrates, formats, projects and processes—the ideal technology takes all facets of a business into account and works to integrate them into one single seamless, productive system. Granpak is happy with HiFlow's attention to their unique business. According to Granpak's team, this acknowledgement is what determined their final decision to choose HiFlow.

Our company

About HiFlow

HiFlow Solutions is a global software company specializing in developing and implementing management information systems in packaging, label, and print production. Our consultants and developers have helped more than 100 packaging, label and print manufacturers increase their productivity and profitability over the past 20 years. HiFlow is an MIS/MES-class management system equipped with sensors installed in machines that allow comparing real productivity with estimations. The system automates the processes of calculation, quotation, preparation, planning, and implementation of production, as well as warehousing and logistics. HiFlow is a flexible system for companies that are so specific that any out-of-the-box system can meet all their needs. System has comprehensive tools that automate packaging workflow and business processes so companies can compete more effectively in the marketplace, maintain faster and leaner production times, and increase margins of profit.
